

GUIDELINES FOR OPERATING YOUR FOOD BUSINESS DURING ALERT LEVEL 3

Guidelines for operating your food business during Alert Level 3

The following information is intended to provide guidance for food and beverage businesses, as Auckland moves into Alert Level 3 (The rest of New Zealand moves into Level 2) as at 11.59am 14 February 2021.

Auckland Area:

For businesses located in the Auckland Region (within Auckland Council boundaries) please refer to these Level 3 requirements (as at 11.59am 14 February 2021).

Rest of New Zealand:

For businesses located in the rest of New Zealand, please refer to our Level 2 Guidelines (as at 11.59am 14 February 2021).

This information may be subject to change and further information will be provided as it becomes available. Please check the version and date on these guidelines.

The 14 February changes to the Alert Levels are to be in effect for 72 hours - Government will be undertaking daily reviews on this.

These guidelines also reflect changes as a result of the COVID-19 Public Health Response (Alert Levels 3 and 2) Order 2020 which commenced at 11.59am on 12 August 2020.

The guidance is for all food and beverage businesses, including those within accommodation providers and those without premises typically open to customers – such as coffee carts and food trucks.

It includes guidance on how to manage contactless pick-up and delivery, as well as some guidance on steps to take when reopening or re-establishing your business at this new alert level.

The Industry Association's health & safety guidance is available and in all cases refer to Ministry of Health and MPI guidelines for safe food practices and food safety.

Please also check the Government Covid-19 website <https://covid19.govt.nz/>

**From 12 August 2020:**

The COVID-19 Public Health Response Act (Alert Levels 3 and 2) Order 2020 commenced at 11.59am on 12th August 2020.

There is now a requirement to display a QR Code for your business. Generate your business QR Code here <https://qrform.tracing.covid19.govt.nz/>

The key measures are:

For Bars, Restaurants, and Cafes

- Premises can only open for contactless pickup and delivery of food and beverage
- Customers cannot enter your premises
- Only those premises which hold an off-licence can sell alcohol for pickup or delivery
- Physical distancing of at least 1 metre between staff is maintained
- Physical distancing of at least 2 metres between staff and customers is maintained
- You must display a copy of the QR code for the business or service in a prominent place at or near the main entrances to the workplace; and
 - have other systems and processes in place to support contact tracing of persons who access or use the premises.

However, the Order does not prevent a person from undertaking any necessary work in any premises for either of the following purposes:

- i. minimum basic operations required to maintain the condition or value of, or clean, the premises, plant, equipment, or goods, care for animals, receive stock or freight, and enable and support workers to be able to continue to work remotely from their homes:
- ii. work required to prepare the premises for opening (and meet public health guidance).

For Accommodation Services:

- Please see our Accommodation Level 3 Guidelines.

Mask Use:

At Level 3 current Health guidance is that wearing masks is highly recommended.

Information on how to use a mask safely is available [here](#).

The guidelines have been split into the following sections:

Guidelines for operating your food business during Alert Level 3	1
SECTION 1: General Principles	4
SECTION 2: What to consider before you open at Level 3	5
Health & Safety	6
Covid-19 Safety Plan – WorkSafe	6
Food Safety	8
Menu development	12
SECTION 3: Managing contactless orders	13
SECTION 4: Food preparation for contactless delivery and pick-up	17
Physical distancing	17
Hygiene and safe practice	17
SECTION 5: Getting the order to the customer	20
Order identification	20
1. Pick-Up	20
2. Delivery	22
SECTION 6: Looking after your employees and the workplace	23
Staff requirements & health	23
Review shift arrangements and rostering	23
SECTION 7: Sample cleaning checklists	27
SECTION 8: Alcohol	29
Sale and Supply of Alcohol Regulations 2013	29
Frequently Asked Questions for customers	30
Central Government Contacts	31

SECTION 1: General Principles

The Alert Level 3 status means:

- Most, but not all businesses can open under Alert Level 3 with restrictions.
 - Businesses must take health measures to keep their workers safe - maintain physical distance between workers, recording who is working together, limiting interaction between groups of workers, disinfecting surfaces, and maintaining high hygiene standards.
 - Hospitality businesses can operate under Alert Level 3 for contactless delivery and pick-up (including drive-through) of pre-prepared food and beverages. Customers cannot enter your premises.
 - People are still instructed to stay home unless for essential personal movement. Essential personal movement is for activities such as accessing local services and businesses, recreation or work and school.

Expectations of our Industry - Leadership and Engagement

Leadership: The expectations of customers, the community, staff, and regulators is that workplaces will meet the highest possible standards and that managers, supervisors, and individual staff actively manage adherence to the safety measures and expectations. We expect all involved to demonstrate leadership and appropriate self-supervision to ensure that these standards are met and that they are looking out for the health and safety of their colleagues and community while at work.

Engagement: Generally you will develop more effective plans and practices that staff will follow if you involve your people in their development. This is also likely to give your people more confidence that they will be safe at work, and are doing their bit to keep their communities safe. Workplaces must engage with employees (as individuals or representatives) in any decision making for changes to work practices. Any staff consultation and/or feedback should be an ongoing process so that workplaces are able to improve practices and learn lessons to continuously improve management and safety.

SECTION 2: What to consider before you open at Level 3

The following list outlines some of the considerations to step you through the process of implementing your contactless delivery and pre-ordered pick-up programme. Further guidance is provided throughout this guide.

1. Assess whether this is a viable option for your business. Can you successfully adapt your business model to implement delivery and/or pick-up? What is the profit margin on a more limited takeaway menu? Does your current menu adapt well to delivery and takeaway, or will you need to develop a new one? How will this impact your rent abatement (if you have one in place) or other items such as insurance?
2. Consider the health & safety obligations for your workplace, including the requirement to consult with workers and prepare a Safety Plan for Covid-19 (see Health & Safety information below).
3. Including delivery will need changes to the business's Food Control Plan (see NZ Food Safety information below).
4. Consider if you are going to use a third party delivery partner (e.g. Menulog etc), or if you are going to manage the delivery within your business.

If you are going to manage this within your business, you will need to consider items like the training, insurance, rostering, and Employment Agreement changes implications. It is recommended that you seek employment advice about this. You will also need to implement clear Policies and Procedures for this. MPI have further guidance on transporting food, available [here](#).

If you are using a third party, you need to satisfy yourself that the way the third party will interact with you will keep your staff, business and the community safe. You and your third-party should share their Covid-19 Safety Plans

5. Either contact the third party delivery provider, or establish your own group of delivery drivers. (The Industry Associations have templates and policies, and can provide advice, if you are considering to redeploy some of your staff temporarily as delivery drivers.)
6. Set up your takeaway delivery/pick-up menu (see menu development tips below). We recommend no more than 15 food items on the takeaway menu. A curated drinks menu should be considered.
7. Consider how customers will order online - if using a delivery partner this is taken care of for you, however if you are organising delivery yourself, or providing a takeaway service, ideally the whole system will need to be enabled to order and pay for online. Alternatively, if this is not possible, set up your takeaway menu online and ask customers to order by phone. (If order is made via phone, payment details should ideally be made over the phone as well, to maintain a fully contactless system.)

8. Consider your rostering and any requirements to reorganise the kitchen layout to manage physical distancing. It is recommended that where possible a distance of 2 metres (or more if possible) between staff is maintained. It is recognised that this may be difficult in small kitchens and food trucks, therefore in a controlled workplace environment if risks can be managed, for instance through the use of personal protective equipment such as masks and gloves a minimum of 1 metre distance may be acceptable. Employers should have measures in place to minimise the amount of time that employees are working at distance of less than 2 metres. The Industry Associations can provide some suggestions on rostering management. Guidance is also provided in Section 6 of this guide.
9. Consider the process for delivery and pick up and how both the delivery and pick up will be made – these guidelines outline the process. Businesses must ensure that food and drinks are able to be delivered to the customer safely, maintaining food safety and health and safety requirements.
- 10. Ensure that a copy of the QR code for the business or service is displayed in a prominent place at or near the main entrances to the workplace; and that systems and processes are in place to otherwise support contact tracing of persons who access or use the premises.**
11. Complete a marketing plan to ensure that your customers and the general public know you are open for contactless delivery and pick-up and measures you have in place to ensure safety.
12. Complete a complaints process policy. How will you ensure that orders are correct before being received by the customer. How will you manage complaints and rectify any wrong orders etc?

Health & Safety

Hospitality New Zealand Covid-19 Safety Plan

HNZ has produced a Covid-19 Safety Plan, including information and templates.

You can find the member resource here <https://api.hospitality.org.nz/wp-content/uploads/2020/05/COVID-19-Safety-Plan-Toolkit.pdf>

Covid-19 Safety Plan – WorkSafe

Before you open you should self-assess your ability to operate safely at Alert level 3. Businesses are obliged to eliminate transmission risks where possible, and where not possible to eliminate, to substitute work practices or provide as higher level of control as possible to minimise risk. WorkSafe expect that businesses maintain, or create new, practices that meet or exceed the Ministry of Health guidelines as they are updated.

You will need to think about how you are going to manage risks and protect workers and customers under Alert Level 3. You should document your thinking in a Covid-19 Safety Plan. You also need to discuss and share the plan with everyone at work – including workers, contractors, and suppliers – before the work starts.

The key controls that have been decided as necessary to minimise the risk of passing on the COVID-19 virus at work are:

- supporting people with flu-like symptoms to self-isolate
- ensuring separation distances
- disinfecting surfaces
- maintaining good hygiene, particularly hand hygiene and good cough/sneeze etiquette
- keeping records to facilitate contact tracing.

The purpose of planning is to ensure:

- effective implementation of COVID-19 controls, and
- the health and safety of workers and other people isn't put at risk from changes that are made to work arrangements because of this pandemic.

Covid-19 Safety Plan Content: To ensure you are minimising the risk of COVID-19 appropriately, and that your business can continue to operate safely, you need to consider the following questions. Your plan is a record of how you will achieve this.

1. How will you manage the risks of restarting part or all of your operations?
2. How will you ensure all workers know how and are able to keep themselves safe from exposure to COVID-19?
3. How will you gather information on the wellness of your workers to ensure that they are safe and well to work?
4. How will you operate your business in a way that keeps workers and others safe from exposure to COVID-19?
5. How will you manage an exposure or suspected exposure to COVID-19?
6. How will you evaluate, and continuously review, whether your work processes or risk controls are effective?
7. How do any changes impact on the risks of the work you do?

More information and guidance on helping to answer the above questions, can be found here

<https://worksafe.govt.nz/managing-health-and-safety/novel-coronavirus-covid/operating-safely-what-you-need-to-think-about/>

Food Safety

Food businesses must take steps to ensure food is safe and suitable, and additional requirements are needed if you want to make changes to the way you operate, such as adding delivery. Key information is available on the MPI website [here](#) and this information has now been updated.

[MPI COVID-19 and food safety at Alert Level 3](#)

Food Safety – MPI Advice

Under Alert Level 3, all primary sector businesses and support services can operate, as long as they can operate safely.

[Safe work practice](#)

Under Alert Level 3, all businesses permitted to operate should have a COVID-19 Safety Plan that sets out how they operate safely.

[COVID-19 Safety Plan – WorkSafe](#)

Food businesses can operate under Alert Level 3 so long as they deliver or offer pre-arranged collection of goods bought online or by phone. Some specific examples include butchers, bakeries, greengrocers and takeaways.

Businesses that require face-to-face contact, or people congregating in a specific area, can not operate under Level 3.

[Physical distancing rules for this Alert Level - COVID-19](#)

Making changes to a food business in Alert Level 3

The following guidance is for businesses which operate under the Food Act 2014 (including butchers, fishmongers, bakeries, delicatessens, cafes, restaurants, takeaways, food service, manufacturers, food transporters, cheesemakers, winemakers and horticultural growers) who want to make changes to their existing Food Control Plan or National Programme.

These scope changes can include:

- Selling takeaway food,
- Delivering/transporting food,
- Meal kits and breaking bulk food into smaller packaging for retail,
- Making chilled / frozen prepared food, and/or
- Making jams, sauces, and chutneys

If you want to make a scope change, you will need to work through the My Food Rules (online registration) tool. When completing the questionnaire, you will need to include your original activities as well as the activities you want add.

Once you have successfully completed the My Food Rules questionnaire, you will receive a step-by step guide about what plan/ programme you need, and who you should be registering with. In all cases, if you are planning on making changes to your business, let your Registration Authority (New Zealand Food Safety or your local council) know, by email or phone. Please note that fees and charges may apply.

[My Food Rules](#)

[Making changes to a food business in Alert Level 3](#)

Good hygiene

It is more important than ever that food businesses apply strict food preparation and hygiene practices.

In addition, if you are an employer, we ask that you:

- make sure staff are aware of the symptoms of COVID-19, and how they can self-isolate if the need arises
- make sure staff are supplied with face masks and other required personal protective equipment, and know how to correctly put on, wear, and take off this equipment
- ensure that food handlers are trained appropriately in food hygiene practices appropriate to their premises
- ensure effective supervision of food handlers to reinforce hygienic practices
- ensure that appropriate facilities are provided for hand washing or sanitation (for example, alcohol gels/ wipes) to enable food handlers to practice good hygiene
- ensure that food handlers and external contractors are aware that they must report any signs/ symptoms of respiratory illness before or during work
- be vigilant and ensure that food handlers and other staff are not ill and are fit to work
- check staff health daily before work and ensure that staff with symptoms stay home until medical advice is obtained and they are cleared to return to work
- make sure you are aware of staff who have recently returned from overseas
- must not knowingly allow workers to come to a workplace when they are sick with COVID-19, or if they have been advised to self-isolate under public health guidelines for COVID-19

Self-isolation for close contacts

Anyone who has been identified as a close contact of a suspect or confirmed case is required to self-isolate, report to their manager, and to not come to work for 14 days.

This includes staff who have returned to reside in a region at a lower Alert Level.

[Self isolation for close contacts](#)

Scheduled food verification

Food verification services are essential services to support businesses during Alert Level 3. It's very important that these continue during the COVID-19 response to make sure food safety is managed properly.

MPI have set up a Remote Check System of Food Act 2014 businesses as an interim measure until on-site verifications can resume. This means that the Food Act verifiers that have completed the necessary Remote Check training, can complete scheduled verifications with food businesses off-site, via a phone call or using online technology such as Skype.

For more information, Food businesses owners/ managers can contact your verifier or email foodactinfo@mpi.govt.nz.

Advice for food handlers

Food handlers at businesses and at home should continue to follow standard, good personal hygiene practices that reduce the risk of transmission of most foodborne illnesses.

All the rules regarding food safety and hygiene still apply. It is more important than ever that these practices are maintained to reduce the risk.

Good practices include:

- regularly washing and thoroughly drying hands or sanitising hands (e.g. alcohol gels/wipes)
- wearing a face mask and other appropriate personal protective equipment
- using clean utensils to handle cooked and ready-to-eat foods, and not touching the food directly
- not coughing or sneezing over food
- avoiding touching your nose, mouth and hair when preparing or serving food
- keeping people who are coughing and sneezing away from food
- avoiding close contact, when possible, with anyone showing symptoms of respiratory illness such as coughing and sneezing.

The rules for hand washing don't change – food handlers need to wash hands (even if they have no disease symptoms):

- when starting work
- before preparing or handling cooked or ready-to-eat food
- after handling or preparing raw food
- after handling waste food or rubbish
- after cleaning duties
- after using the toilet
- after blowing their nose, sneezing or coughing
- after eating, drinking, or smoking
- after handling money
- after touching items/furniture/fittings.

Good hygiene and cleaning will also prevent cross-contamination between raw or undercooked foods and cooked or ready-to-eat foods in the kitchen or service area.

It is important that food handlers inform their employer, avoid preparing food for other people, and seek medical advice if they think they have symptoms of respiratory illness.

Extra measures food manufacturers can take to protect their staff from illness

Where businesses want to take extra measures to protect their staff and customers, they should do so in line with Ministry of Health advice on social/physical distancing and limiting the spread of the virus.

This includes communicating staff sickness policies to employees, and ensuring staff hygiene, cleaning and sanitation processes continue on the factory floor.

Ensure all contractors, visitors, delivery drivers coming into your plant follow Ministry of Health guidelines.

Other measures in line with the Ministry of Health's advice on limiting the spread of the virus include sanitising shared equipment like forklifts, pallet jacks, box strappers and other equipment staff will touch directly throughout the day.

For communal areas, like canteens and break rooms, these extra precautions are in line with Ministry of Health advice:

- Increase the frequency of disinfecting touch-points on point of sale terminals, EFTPOS machines, door handles and other frequently-touched surfaces
- Sanitise chairs and tables frequently and between shifts
- Make hand sanitisers available
- Everyone at your business practicing frequent and thorough hand washing.
- Self-serve buffets and high-use utensils (tongs, serving spoons) taken out of use for the duration of COVID-19

Menu development

Not every restaurant has a menu already tailored for delivery or pick-up. Consideration needs to be given to the types of items that will be on offer, their transportability and profit margin for the business.

- Keep the menu short. This will assist customers to quickly and easily view and order the delivery options but in addition enables more precise monitoring of the food chain.
- As not all menu items are ideal for delivery or pick-up, consider creating a menu that exclusively features dishes that travel well, can be refrigerated and reheated without compromising food quality.
- Consider whether to adapt existing menu items, or alternatively, create a completely separate take out menu.
- Your online menu for contactless delivery and pick-up should also feature variety and affordable price points.
- It is vital that you ensure that each menu item available is profitable for your business. Prioritise items that carry high profit.
- Consider the following when developing your menu items:
- Does the meal travel well?
 - Will the meal get soggy or watered down with time?
 - Will the meal be presentable when it reaches it's destination?
 - Do you have the right packaging for the meal?
 - Will the profit margin for the dish cover the delivery costs?
 - Will the prep time make total time for delivery or pick-up too long?

SECTION 3: Managing contactless orders

Businesses must have systems and processes in place to –

a. ensure that—

- i. level 3 physical distancing can be maintained by persons accessing and using the premises, so far as is reasonably practicable taking into account the nature of the business or service; and**
- ii. the risks that arise to the extent physical distancing is not fully maintained on the premises are mitigated; and**

b. ensure that a copy of the QR code for the business or service is displayed in a prominent place at or near the main entrances to the workplace; and

c. otherwise support contact tracing of persons who access or use the premises; and

d. ensure that—

- i. no customers or clients enter the premises (other than only, and then to the minimum extent necessary, to collect goods through a method that minimises physical contact and does not involve entering a building); and**
- ii. there is no close personal contact with customers or clients.**

How to create your QR code poster

Businesses can generate and print their own QR Codes at <https://qrform.tracing.covid19.govt.nz/>

To use the webform, you will need:

- a valid New Zealand driver licence so your identity can be verified
- the address details for each of your premises
- your email address
- an email address and contact phone number for each of your locations.

If your business has a large number of premises or the person filling in the form does not have a driver licence, they can also get your official QR codes by sending a [completed template](#) to the NZ COVID Tracer support team at help@covidtracer.min.health.nz.

Please note you need to create a separate poster for each of your premises or unique locations, but can print as many copies of each poster as you need for each premise. Print your posters in A4 and in colour (if possible).

Make sure to put your posters on display in prominent locations which can be used by customers. If you can, place a poster on the left-hand side of your front window with the top approximately 130cm from the ground. Please see [Tips on displaying your NZ COVID Tracer poster](#) for further guidance.

You can find further information about the QR codes on the [Ministry of Health website](#). Further information about the requirements and restrictions for businesses during Alert Level 3 can be found on the [Unite against COVID-19 website](#)

Online or phone ordering and payment methods

The customer orders online or via an app using the venue's online ordering system, or, views the menu online and makes their order by phoning (or texting, if this is set up) the business.

To reduce any risk of transmission of the virus, payment should be made online or by phone using cashless methods. However, if this is not possible, you can accept payment at the point of pick-up if you have good systems in place to maintain physical distancing and good hygiene. If online or phone payment cannot be made, payWave should be utilised as the secondary payment option, as this maintains a contactless transaction.

Systems to maintain physical distancing and good hygiene practices with payment transactions should include:

- Allow enough time between the collection of orders to ensure payment can be made and customers are not queueing to pay and pick-up their food.
- Physical distancing markers to maintain 2 metre distancing requirements between your staff and customers
- Clear signage and instructions outlining that customers must wait at physical distancing markers before being called forward by your staff to pay and collect their food
- If cash is accepted (and should only be done so as a last resort to other payment methods) develop systems that limit the amount of handling time for your staff.
- Have sanitiser available for customers and advise your staff on regularly washing and sanitising their hands and other shared surfaces (such as EFTPOS terminals).

Collecting details to assist with contact tracing

You must:

Ensure that a copy of the QR code for the business or service is displayed in a prominent place at or near the main entrances to the workplace; and otherwise support contact tracing of persons who access or use the premises.

How you “otherwise support contact tracing of persons” will be a business decision, MBIE have provided the following information:

When to keep a contact tracing record

Where a business or service cannot operate without physical contact or close proximity between people (e.g a restaurant or café), it must ensure its customers have either scanned the QR code with the NZ COVID Tracer app or have used an alternative record keeping system or process to support contact tracing (such as appointment records or a paper-based sign-in register).

A contact tracing record does not need to be kept if the business or service can ensure that everyone on the premises can maintain physical distancing. However, all businesses should continue to encourage their customers to scan the QR codes with the app to support contact tracing.

Alternate options for contact tracing

Businesses and services can use any number of different systems and processes to keep a record of the people arriving on site. This can be through an app, an electronic system, or a pen and paper register, for example.

It is the responsibility of the business or service to ensure they have appropriate processes and systems in place. However, there are two pen-and-paper register templates available at [covid19.govt.nz](https://www.covid19.govt.nz)

[Business Toolkit — covid19.govt.nz](https://www.covid19.govt.nz)

Collecting and holding customer contact information

Paper-based records should include the name, date, time, contact details (phone number, email address or physical address) of all people who have been on the premises, including all workers. The records should be kept for at least 28 days (two transmission cycles).

Note: People don't need to give all of their contact details. For example, they may choose to provide only their phone number, or only their email address. You also need to comply with privacy requirements in the handling private personal information.

MBIE [Contact Tracing Information](#)

Further suggestions are below:

- Order and customer details to be recorded at the time of order (ideally either online or over the phone).

You should collect the following information:

- Full name
- Contact details – mobile phone and email
- Time of interaction (e.g. the time they collected food/went through drive-through)
- Hospitality New Zealand recommends electronic contactless registers –and have explored a number of options for members, in order to remove the need for multi-contact point, paper based systems. Further information is available here:

www.hospitality.org.nz

<https://hospitality.org.nz/resources/all/contact-tracing-requirements>

[Hospitality New Zealand Contact Tracing Register](#)

SECTION 4: Food preparation for contactless delivery and pick-up

As a starting point, you should follow the food safety procedure in your Food Control Plan and on the MPI Covid-19 website which include Safe Practice guidelines:

<https://www.mpi.govt.nz/protection-and-response/covid-19-coronavirus-information-and-advice/covid-19-and-food-safety/covid-19-and-food-safety-in-alert-level-3/>

Physical distancing

Maintain physical distancing between workers in workplaces under Covid-19 Alert Level 3. The Public Health Order states a minimum of 1 metre distance between staff is maintained, and a minimum of 2 metres between staff and customers is maintained.

Except in the situations where the family bubble is the working bubble, Worksafe recommended that where possible a distance of 2 metres (or more if possible) between staff is established. If a distance of 2 metres is not possible, in a controlled workplace environment if risks can be managed, for instance through the use of personal protective equipment such as masks and gloves, a minimum of 1 metre distance may be acceptable

In food production/processing facilities and retail food establishments, an evaluation should be made to identify and implement operational changes that maintain physical separation of 2 metres, if possible. Consider using masking tape to show divides in kitchen and other venue areas to keep people aware of the 2 metre rule, or a minimum of 1 metre (if risks are being managed at this distance).

Keep the number of people involved in the preparation of each menu item at minimum levels to ensure traceability and assurance. Employers should also consider measures they can put in place to minimise the amount of time that employees are working at a distance of less than 2 metres.

Hygiene and safe practice

In general, the risk of spread of COVID-19 from food products or packaging is very low. However businesses should ensure appropriate hygiene practices are upheld in regards to packaging.

Like the flu, COVID-19 is spread by droplets from person to person. Good hygiene can prevent its spread.

People can catch the virus through their eyes, nose or mouth.

The scientific evidence proves that COVID-19 is spread by droplets. When an infected person coughs, sneezes or talks, they may spread droplets containing the virus. These droplets are too large to stay in the air for long, so they quickly settle on surrounding surfaces.

People may get infected by the virus if they touch those surfaces or objects, and then touch their mouth, nose or eyes.

Currently there is no evidence to support transmission of COVID-19 associated with food.

You and your employees may choose to use masks and gloves or other personal protective equipment (if available), however you should reassure your employees that good hand and food hygiene is more important than the use of personal protective equipment.

It is possible that infected food handlers could introduce the virus to the food they are in contact with by coughing and sneezing, or through hand contact. However, this is unlikely to occur if food handlers in food businesses follow standard, good hygiene practices, described below, that reduce the risk of transmission of most foodborne illnesses.

As a food business, good hygiene practices are a part of your business as usual. These usual practices should be maintained, but additional measures will need to be adopted to ensure you're protecting yourselves, your staff and your customers during these extraordinary times.

It is possible that infected food handlers could introduce the virus to the food they are in contact with by coughing and sneezing, or through hand contact. However, this is unlikely to occur if food handlers in food businesses follow standard, good hygiene practices, described below, that reduce the risk of transmission of most foodborne illnesses.

As a food business, good hygiene practices are a part of your business as usual. These usual practices should be maintained, but additional measures will need to be adopted to ensure you're protecting yourselves, your staff and your customers during these extraordinary times.

These practices include:

- proper hand hygiene
- safe food practices
- cough/cold hygiene practices
- avoiding close contact, when possible, with anyone showing symptoms of respiratory illness such as coughing and sneezing.

Food handlers must wash hands (even if they have no disease symptoms):

- before starting work
- before handling cooked or ready-to-eat food

- after handling or preparing raw food
- after handling waste
- after cleaning duties
- after using the toilet
- after blowing their nose, sneezing or coughing
- after eating, drinking, or smoking
- after handling money.

Ensure these steps are followed to maximise safety in the workplace:

- Ensure clean uniforms are worn, put on at work and changed before traveling home etc. washed every shift
- Ensure gloves where appropriate are used for food safety.
- It is strongly recommended that hats are worn and beard masks where appropriate to avoid cross contamination
- Specify staff to be task-specific when preparing ready-to-eat foods with gloves to reduce the need for changing gloves when tasks change. (However, gloves will still need to be changed regularly and hands must be washed between glove changes and when they are removed. Gloves allow bacteria to build up on the surface of hands, so handwashing is important when they are removed to avoid contamination of food.)
- Identify backup sources or modify menus if ingredients and food supplies are not available
- Appropriate hygiene and sanitation protocols should be implemented for all reusable containers.
- Check your food safety equipment
- Purchase batteries and spare thermometers and test strips.
- Make sure your first aid kits are stocked.

Businesses should ensure appropriate hygiene practices are upheld in regards to packaging. This could include only using single use containers for meal and beverage orders once, packaging meals in paper delivery bags to ensure no direct contact.

IMPORTANT: Maintaining physical distancing in the absence of effective hygiene practices may not prevent the spread of COVID-19. Food operations should be vigilant in their hygiene practices, including frequent and proper hand-washing and routine cleaning of all surfaces.

SECTION 5: Getting the order to the customer

Order identification. You will need to have an order identification system in place. For example: An order receipt, containing the details of the order, should be stapled to each package for identification; Order name and/or number written on the order.

1. Pick-Up

There are a number of ways that you can get your food business up-and-running for customers so they can pick-up food from you. You could:

Deliver food to people waiting in their cars outside your premises

You may recommend customers park at a nearby car park, or some reserved parking spots nearby, the order can then be delivered to the car – placed on the bonnet of the car, by the staff member while the customer remains in the car. If you are able to use car park facilities, then you may also need the customer to provide the vehicle registration number for identification.

Temporary parking facilities should only be established where it is appropriate. Businesses should ensure they have any necessary permits and operate any parking safely, maintaining adherence to the road rules (e.g: no parking on yellow lines) and customers should be reminded of this.

You could establish a safe pick-up point outside your premises

Factors to consider when designating a safe pick-up point:

- Physical distancing of 2 metres between staff and customers can be maintained.
- Customers cannot enter any part of the premises, so you need to assess the most suitable option for your premises. This may need to be a pick-up area table at the main entrance. Other fire exits must be kept clear.
- The pick-up area should be well away from the kitchen area and at a distance from as many staff as possible.
- Hand sanitiser should be available for customer use
- Staff handing over the food should place the food down on a table or counter at the pick-up area, and keep a 2 metre distance from the customer at all times. Distance markings should be in place, and notices should specify the process. This area should regularly be sanitised throughout the day and staff should wash or sanitise their hands after each order is picked-up.

Signage should be clearly displayed outlining:

- Where the pick-up point is
- What the pick-up system is, how it works, and what the customer needs to do
- That anyone who is feeling unwell or showing signs of illness must not pick-up from the venue.
- The food must be taken away and consumed elsewhere. (Do not allow customers to use any outdoor seating areas for the consumption of food.)

Customers whose orders are ready should approach one at a time to collect their orders.

- Identify allocated collection times for customers to avoid queuing outside the premise.
- Consider a method of advising customers when their order is ready (e.g: by text or app) so they approach the pick-up point one at a time
- Physical distancing markers implemented outside of your premises for situations where there may be more than one person waiting. This would be a contingency plan, as you should be planning to only have one person waiting at a time.

A method of contactlessly verifying the correct customer for each order, should be implemented – for example: by name, or an order number etc.

The staff member working the pick-up service should practise good hygiene at all times. This will include sanitising their hands and surfaces in between all interactions. **Gloves and masks are not a requirement, but current Health guidance is that they are highly recommended.** Staff members must ensure that they have no direct contact with customers, containers or food items (which will remain in paper bags).

Appropriate waste bins must also be available at the pick-up point.

Once pick-up is completed, you should record this through the ordering system you have in place.

What about food trucks and coffee carts?

Food trucks and coffee carts can operate in the same manner as other food businesses under Alert Level 3 by accepting contactless orders and payment. The guidance outlined above for delivery and pick-up can be used by food trucks and coffee carts to establish operations under Alert Level 3.

2. Delivery

The order is picked up by the delivery person and taken to the customer's address. The delivery person may choose to use gloves and mask, but as with food handling, it is highly recommended but not a requirement. Regular hand washing and/or sanitisation is what is required. You could however choose to limit the number of people handling the food containers or items and could package the food in a paper bag to be given to the person delivering the order.

Contactless delivery can be achieved in a number of ways:

- A designated safe spot is identified at the time of ordering and the delivery driver texts the customer, or texts a photo of the delivered order to the customer, to let them know that the order has been delivered.
- The delivery person could deliver the food package to the customer's door, knock on the door and step back 2 metres to allow for physical distancing requirements.

Customer picks up the order and delivery driver leaves.

Vehicles used for delivery should be cleaned every day and steering wheels and door handles of the car regularly sanitised. Delivery persons should regularly wash or sanitise their hands.

3. Drive-through

Contact between the server and the customer must be minimised, so physical distancing rules of 2 metres should apply.

To maintain this, measures should be put in place so that the server places the food order on a counter for customers to pick up and steps back to allow the person to collect their food.

SECTION 6: Looking after your employees and the workplace

Staff requirements & health

All participating businesses should have a health & safety policy and Covid-19 safety plan, as outlined in the Before Opening section of this guide. Employers will need to self-assess their ability to operate safely. This includes thinking and documenting how you're going to manage risks and protect workers and customers under Alert Level 3. Include your staff in developing plans and make sure they will be able to provide feedback so the plan can continue to improve.

Specific Industry Association health & safety policy guidance is available to assist in this area and further information is available on the Worksafe website, [here](#).

The plan must cover:

- Staff wellness policy, making sure staff stay at home when they are sick and monitoring their general health. Provide the Healthline number in advance to all staff.
- Any employee suspected to be sick at work must be sent home and asked to contact Healthline.
 - Advise staff who may have come into contact with someone who has Covid-19 to self-isolate for 14 days and contact the Healthline or the Ministry of Health.
- Ensure staff self-isolate if required, following MOH guidance.
- No staff member with compromised immunity, or over the age of 70, will be able to participate as part of the team in the contactless delivery, pick-up and drive-through programme at Level 3.

Review shift arrangements and rostering

Changes to limit contact between workers will be effective in slowing down the spread of novel coronavirus. Establishments need to consider how they can safely operate their business maintaining minimum physical distancing requirements of 1 metre between staff and 2 metres between staff and customers. These requirements apply to all aspect of the process, from food preparation, through to food pick-up and delivery.

- Split kitchen into two teams - For businesses with larger kitchen teams, consider using two different kitchen teams where possible - Team A and Team B. Roster the shifts so that the teams are not working with each other. This means that if anyone from one of the teams got sick, or if they are required to isolate because of close contact with a person with COVID-19, the second team is still operational.
- Consider doing the same for Front of House teams, if possible.
- Increase time between shifts or service periods (e.g. breakfast and lunch; day/night shifts) to minimise staff interaction and allow for increased cleaning.
- Limit the number of people in contact with each other in the kitchen, where possible.

- Minimise the overlapping of shifts/rosters as much as possible.
- Considering spreading prep out, either physically or by schedule. Kitchens often have tight workspaces where staff are working closely together, particularly in prep areas.
- Restrict face-to-face team meetings as much as possible. Keep any meeting to less than 15 minutes, and ensure physical distancing is maintained.
- Stagger breaks - so staff are not having breaks together, sharing lighters etc - ensure any furniture in social spaces maintains physical distancing requirements.
- Make sure staff arrive at work no longer than 10 minutes before their shift starts and leave immediately after their shift ends.

Other considerations at Alert Level 3

Physical Distancing and Hygiene

- **Physical distancing** - establishments need to consider how they can safely operate their business maintaining physical distancing requirements of **at least 1 metre (or more) between staff**. It is noted that in a controlled workplace environment if risks can be managed, a minimum of 1 metre distance between staff may be acceptable. **Physical distancing of 2 metres between staff and customers must be maintained at all times**. These requirements apply to all aspect of the process, from food preparation, through to food pick-up and delivery.
- **Surface disinfectants** - use suitable surface disinfectants and continue to adequately clean any food preparation surfaces and equipment using detergent and hot water.
- **Reinforce hand hygiene** amongst staff and make sure they wash their hands before and after they have had their breaks and everyone is taking necessary precautions. Provide hand sanitisers for staff, including delivery drivers who come to pick up the food for delivery.
- **Hand washing** - Regardless of the availability of hand sanitisers, all food handlers should regularly wash their hands using warm running water, hand soap and drying with disposable towels. Hand washing in separate sink, also using a nail brush to brush under nails. (There may need to be one nail brush allocated per person, kept in a named ziplock bag or similar).
- **Cleaning and sanitising products** are required for food safety and for infection control by all sectors at this time. Businesses must ensure they have sufficient access to sanitisers and cleaning supplies.
- **Monitor sanitiser concentrations** to ensure effective, but not excessive, product is being used.
- **Reduce the amount of space** used in the business to reduce cleaning and sanitising needs in both front of house and back of house.

Kitchen operation

- **Cross contamination** - ensure that the same equipment is not used for raw and ready to eat foods unless these can effectively be cleaned and sanitised between uses. Complex equipment such as Vac Packers must not be used for both raw and ready to eat and cooked products unless an agreed effective cleaning and sanitising method is in place.
- **Temperature control** - Foods that need refrigerating must be kept cool during transportation. This may mean food needs to be packed in an insulated box with a coolant gel or in a cool bag. When transporting hot food, it should be kept hot. This may need to be packed in an insulated box or bag. It is recommended to keep travel distances short and times limited to within 30 minutes.
- **Allergens** - ensure staff taking orders always ask customers if they have a food allergy, and that staff are provided with adequate information so they can advise customers on what the food contains. People with a food allergy or intolerance should not be served unless a guarantee can be made that their food has not been contaminated with their specific allergen. Note, a change in available ingredients may affect allergen control.
- **Suppliers** - ensure continued use of reputable suppliers. Implement policy around suppliers and delivery that manages delivery process and ensure appropriate contact tracing protocols are in place.
- **Make sure** all plates, utensils and other kitchen equipment used in food preparation are cleaned, sanitised and washed with hot water, washing liquid and dishwasher sanitiser.
- **Use batch dishwashing** if possible, to reduce the use of detergents and sanitisers.
- **Ensure** all hand sinks (In the kitchen, bathrooms and other areas) are accessible and available for people to use with handwash, warm water and paper towels to dry. Make sure the hand sinks are kept clean and cleaned regularly.
- **Make sure** that there are bins available for the staff to use to dispose of their paper towels and that these bins are disinfected and cleaned as well as emptied as much as possible. It is advisable that bins are plastic bag lined.
- **Provide plenty of paper towels** to encourage hand hygiene and appropriate rubbish disposal.

Staff training

- **Continue to train** and retrain staff in the standard of operating procedures and preventative controls that can be taken to ensure food safety and health and safety within the establishment.
- **Train all staff in the Covid-19 Safety Plan**
- **Provide official posters** reinforcing best handwashing practices located in kitchen and other staff areas.

Food delivery

- **Vehicles** - All vehicles used to transport or deliver food must be kept clean, in good repair and condition and free from sources of contamination to protect food. All foods must be fully wrapped or packaged for transport or delivery to prevent contamination. Requirements for food transport is available at: <https://www.mpi.govt.nz/protection-and-response/covid-19-coronavirus-information-and-advice/>
- **All delivery drivers** should practice good hygiene, such as sanitising after each delivery, and given direction about how to maintain physical distancing requirements.

SECTION 7: Sample cleaning checklists

It is important to ensure everyone is working together and clear steps are followed. Industry Association health & safety guidance and detailed cleaning checklists are available to assist. Here is an outline of what a business can do to ensure your business is doing all it can to protect and promote good hygiene practices through the contactless delivery and pick up programme.

Kitchen / Back of house

- Clean and sanitise all areas where food is being prepared – as used
- Clean and sanitise all utensils, plates – after every use
- Clean and sanitise all washing stations and sinks - every 2 hours
- Clean and sanitise any grills, cooking equipment and/or ovens - daily
- Clean aprons/uniform - daily
- Clean and sanitise all rags, or any other cleaning cloths, hot wash / commercial cleaner - as used
- Clean and sanitise walls - as needed
- Clean and sanitise floors - between services
- Empty, clean and sanitise all disposable bins - daily
- Clean and sanitise walls and other areas that are a high-touch point in walk-in refrigerators/freezers (especially handles and the door) - daily
- Clean and sanitise coffee machines - between services
- Clean and sanitise drinks fridge handles - daily
- Empty, clean & sanitise Ice makers - daily
- Ensure use of and keep stocked hand washing stations
- Refill soap dispensers - daily
- Ensure dish / glass washers are working at correct temperature - daily
- Sanitise remote controls (TV's, stereo etc) - daily
- Sanitise all light switches and controls - between services

General Restaurant Area/Front Desk/Order Taking Area

- Clean and sanitise tables and chairs (top and under) - before service
- Clean and sanitise post mix guns - end of each day
- Clean and sanitise Eftpos Machine, Keyboard, Mouse, Electronic Touch base booking computer/ screens - between services
- Sanitise doorknobs, door handles and/or rails (if you have these) indoors/outdoors - before service & every 2 hours
- Sweep and mop the floors - between services
- Clean and sanitise tables - after any use

Bathroom – Staff use only

- Clean and sanitise inside, around and under the sink - daily
- Clean and sanitise soap dispenser/ handwash bottle - daily
- Clean and sanitise toilet brush handle - daily
- Clean and sanitise taps - daily
- Clean and sanitise mirrors/toilet roll handles/doorknobs inside and outside door - daily
- Clean and sanitise the floors - daily
- Empty, clean and sanitise bins - daily

Pick up and drive-through

- Clean and sanitise counter / table area regularly - every 1 hour
- Drive-through operations should ensure that the eftpos terminal is sanitised regularly, using recommended cleaning methods to ensure no damage to the terminal. Eftpos NZ have some guidance on cleaning your terminal (<https://support.eftpos.co.nz/2020/03/12/preventing-transmission-of-covid-19-coronavirus/>).

SECTION 8: Alcohol

Alcohol - unless an off-licence is in place for the venue, you are not legally allowed to sell alcohol for delivery or pick-up. If you do hold an off-licence, then you need adhere to the conditions of your licence.

For remote sales follow the requirements set out in the Sale and Supply of Alcohol Act Regulations 2013, Remote Sales Sections 14 and 15, setting out “Reasonable steps for to verify that people not under purchase age” for the different ordering methods (see links below).

The Regulations for remote sale require the buyer to declare twice that the purchaser and the prospective receiver of the alcohol is 18 years or over. When the customer arrives, the staff member must confirm the identity of the customer collecting the order.

ID Checks must be conducted in a contactless manner

- If the receiver looks under 25, the receiver will be asked to place their ID down, and step away at least 2 meters so that the staff member can verify the age by looking at the ID.

You should contact your local council to discuss this with them first to ensure you will comply with any requirements they may have in place.

Sale and Supply of Alcohol Regulations 2013

Remote sales – Off Licence

- [Section 14: Reasonable steps to verify that people not under purchase age](#)
- [Section 15: Information to be provided by remote sellers](#)

Frequently Asked Questions for customers

How do I know that the food was prepared safely?

For your reassurance, hospitality businesses are taking the following steps:

- Along with our routine cleaning, we are taking extra steps to sanitise all surfaces, increasing the cleaning intervals and monitoring the regularity and cleanliness of our premises.
- Washing and sanitising food contact surfaces and equipment on a more frequent basis.
- Changing out utensils frequently.
- Our staff are trained appropriately in food hygiene practices, but we have been reinforcing hygiene measures, including hand hygiene, and ramping up our practices to stay vigilant, particularly in sanitising and disinfecting procedures Professionally cleaning the venue as often as possible.
- As part of our strategy, our teams know to take sick leave and that they must stay away from the business if they are unwell. We are requiring staff to self-isolate if applicable, following MOH guidance.
- All food businesses must have a current Food Control Plan, registered with MPI.

When will the hospitality sector return to business as usual?

All Government restrictions must be followed at each level:

Restaurants, bars and cafes cannot open their premises to customers at Alert Level 3 and 4. At Alert Level 3, they can sell prepared food and non-alcoholic beverages by contactless delivery and collection (including drive-through). Alcohol can only be sold by venues that also hold an off-licence.

At Alert Level 4, they cannot sell any prepared food or beverages

Restaurants, bars and cafes can open at Alert Levels 1 and 2, subject to the public health measures required at both of those alert levels and restrictions on gatherings, for example distancing between tables.

Who can businesses turn to for further information relevant to the sector?

If you are a business in the hospitality sector, please reach out to the Hospitality New Zealand for further advice and support.
